

Should I take CSE 127 or 327 for my Artificial Intelligence core course?

CSE 127 is recommended for most Cog Sci students. You will gain some understanding of what AI can do, how it works, and ethical considerations of its use.

Students who want a deeper understanding and who might be interested in eventually writing AI software themselves should take the CSE 17 and CSE 140 prerequisites and then take CSE 327. This is a challenging course designed for Computer Science students, so don't take it unless you are well prepared for an upper level CSE course.
